Problem Statement: Farming Equipment Rental System

No of Clients: 30

Abstract:

The **Farming Equipment Rental System** aims to solve this problem by creating a digital platform that connects small-scale farmers with equipment suppliers. Through this platform, farmers can easily rent tools and machinery, improving their farming efficiency, crop yields, and profitability.

The project involves designing a website where:

- Farmers can browse and rent the required farming tools.
- Equipment owners can list their equipment for rental.
- A secure and transparent rental process is maintained.

Technology to be used:

Flutter: For building a cross-platform mobile application with a smooth and responsive user interface.

Dart: The programming language used for developing the Flutter app logic and functionalities.

Firebase: For backend services including user authentication, real-time database, and cloud storage for content and user data.
